

Mar 12, 2012

I have a 28 year old thoroughbred that I have had for 19 years, needless to say he is my pride and joy. Recently we had gotten some poor quality hay and shortly after, my boy "Elliott" developed pretty severe diarrhea. After 3 days I could see things were not getting better when I asked my vet what he thought I should do, his suggestion was to try Equiotic, after 1 dose he was solid again!!!! I was totally amazed and thankful Equiotic cleared up my old boy so quickly.
